Software Engineer with 5+ years of experience working in full stack development roles. Proficient in JavaScript including frameworks and libraries like Node.JS, TypeScript, React, and Angular. Looking for a challenging role to drive innovation and impact at scale.

## Technical Skills:

**Languages:** JavaScript, Python, TypeScript | **Frameworks:** React, Angular, Node.js, Flask, Django | **Tools:** Docker, Git, VS Code | **Cloud Platforms:** AWS (S3), Google Cloud | **Databases:** PostGres, MongoDB | **Version Control:** Git, GitHub

## Experience:

**Software Developer II** — Ascent Cloud, Detroit, MI | *Jan 2024 – current*

### Key Responsibilities & Achievements:

- Develop clean and scalable code for various customers while helping in team effort to update codebase/environment
- Updated data table to use AG-Grid and angular from jquery built table.
- Developed using Salesforce Apex, Angular, Angular.js, JQuery, and Typescript.

**Software Engineer (contract)** — Chargely, remote | *June 2023 – September 2023*

### Key Responsibilities & Achievements:

- Develop Routing for Express API
- Developed using Node, JavaScript
- Work directly with a separate Agency to plan, build, and review codebase/environment.

**Frontend Engineer II** — Flexcar, Boston, MA | *August 2022 – April 2023*

### Key Responsibilities & Achievements:

- Meet with product owners to discuss upcoming new features and changes
- Be a voice as Frontend engineer of team while being apart of the entire development life cycle
- Document coding environments and changes to reference and help onboard new employees
- Work directly with the design team to develop new UI/UX in a fast paced and often changing frontend.
- Work with marketing and social teams to help with promotional and marketing campaigns using GTM and Facebook Pixel.

**Software Engineer** — National Grid, Waltham, MA | *November 2020 – August 2022*

### Key Responsibilities & Achievements:

- Help establish the coding standard and provide feedback to the team on day to day processes/pipelines

- Communicate to product owners on new features while also discussing how to develop future features/updates
- Take part in the interviewing process of new candidates and onboarding new team members
- Help develop and maintain the internal Progressive Web Application and mobile application
- Providing POCs and creating spaces for product design and engineering to discuss upcoming goals and strategize sprints.
- Visit our users in the field and conduct interviews to gather user feedback.

**Software Engineer Immersive Instructor** — General Assembly, Boston, MA | *February 2019 – June 2022*

**Key Responsibilities & Achievements:**

- Prep lesson plans for the week to keep coding standards up to date.
- Provide code reviews and help refactoring PRs with learning developers
- Teach lessons and help build best practices through lectures, code along, pair programming, and assignments.
- Provide on the job experience to newer developers by answering questions and holding webinars to answer questions and speak on topics I have experienced in the workplace.

**Web Applications Developer** — Houghton Mifflin Harcourt, Boston, MA | *November 2018 – January 2019*

**Key Responsibilities & Achievements:**

- Work within a team to produce technical solutions at an enterprise level
- Create and improve on existing code, systems, and architecture
- Leverage developer workflow tools such as Jenkins, Docker, Git,

Postman, Slack, JIRA and Confluence

- Provide detailed documentation on new and existing code
- Created standardization guidelines and provided technical recommendations for business and marketing teams

**Software Developer** — Resilient Coders, Boston, MA | *May 2018 – August 2018*

**Key Responsibilities & Achievements:**

- Coding Bootcamp\*
- Develop and design websites for professionals and businesses through subcontracts gained via self-promotion or coworkers.
- Complete team and individual assignments given by Senior Software Engineer that may include preparing code, correcting code, or designing new projects.
- Solve complex web problems usually with code. Using best practices I would solve problems large and small on a daily basis.

## Education:

**Wayne County community College District (WCCCD)** — CIS: Software Developer, Detroit, MI | *January 2025 – current*

**Per Scholas** — Software Engineer, Detroit, MI | *Completed October 2023*

**Resilient Coders** — Full Stack Software Developer, Boston, MA | *Completed August 2018*

### Certifications:

**Meta Backend Engineer** — Coursera *April 2025*

**Meta FrontEnd Engineer** — Corsera, *March 2025*

**ElasticSearch Engineer I** — Elastic, *February 2019*
